

Supplementary Table 3: Most important patient-related risk factors for chemotherapy-induced nausea and vomiting.²⁶

Risk factor	Supporting studies	Odds ratio* (95% CI)	p
History of CINV and/or pregnancy-related nausea/vomiting	15	3.13 (2.40–4.07)	<0.05
Female	18	2.79 (2.26–3.44)	<0.05
Expectancy of CINV	6	2.61 (1.69–4.02)	<0.05
Younger age	27	2.59 (2.18–3.07)	<0.05
Anxiety	6	2.57 (1.94–3.40)	<0.05
History of morning sickness	6	1.97 (1.46–2.65)	<0.05
History of no or minimal alcohol intake	12	1.94 (1.68–2.24)	<0.05

*An odds ratio >1 indicates an increased likelihood of experiencing CINV.
CI: confidence interval; CINV: chemotherapy-induced nausea and vomiting.
