Where a species is in brackets next to its corresponding genus, denotes that both genus and species are statistically significant. If species not in brackets, only the species is significant. Where genus level is not available or scarce, family taxonomic level and above was included and listed in bold.

\*article contains more patients that had undergone chemotherapy, these are excluded from numbers and results.

<sup>\$</sup>faecal sample.

<sup>!</sup>swab sample.

CRC: colorectal cancer; WGSS: whole genome shotgun sequencing; Pyro: pyrosequencing.
