

Supplementary Table 1: Prevalence/level of medication adherence and quality of life.

Outcome Variables	Frequency (%)
N=410	
Medication Adherence Status*	
Adherent	144 (35.1)
Non-adherent	266 (64.9)
QOL†	
Good QOL	212 (51.7)
Poor QOL	198 (48.3)
Seizure Frequency‡	
No seizures in the last 3 months	207 (50.5)
1-3 seizures in the last 3 months	82 (20.0)
4-6 seizures in the last 3 months	68 (16.6)
≥7 seizures in last 3 months	53 (12.9)

*Those who scored >7 were adherent and those who scored <7 were not adherent.

†Those who scored above the mean of 50.10 had good QOL and those who scored below the mean of 50.10 had poor QOL.

‡Seizure frequency categories adopted from Ibinda et al.¹⁷ Those with three or fewer seizures in the last 3 months are defined as having less frequent seizures, while those with four or more seizures have frequent seizures.

QOL: quality of life.
