Supplementary Table 1: Serial hepatic and pancreatic imaging, 2017–2025, including pre-treatment CT showing a normal pancreas without gallstones or features of chronic pancreatitis.

Modality	Findings
MRI liver (2017)	Hepatic fat fraction 25%, improving to 11% on follow-up; normal liver stiffness
Liver ultrasound (2018)	Hepatomegaly with severe fatty infiltration; no gallstones; normal biliary tree
Liver ultrasound (2023)	Moderate steatosis; no focal lesion; portal vein patent
CT abdomen (2025, prior to initiation of tirzepatide)	Normal pancreas and pancreatic duct; moderate hepatic steatosis; no gallstones; no evidence of chronic pancreatitis
